

ABSTRACT

1 A platform scanner is proposed to serve for a learning aid tool for kids of
2 school age to learn words or painting. The platform scanner comprises a housing
3 and a scanning carrier, in which an opaque handwriting board is disposed on an
4 outside portion of the housing, and the scanning carrier is located on the
5 handwriting board. Moreover, a transmission shaft is arranged in a direction
6 parallel with the handwriting board, and one end of the scanning carrier is mounted
7 on the transmission shaft so that the scanning carrier can be horizontally moved
8 along the transmission shaft for scanning and reading data on the handwriting
9 board.
